

# R-2508 Low Level Routes

As you can see, the common low level routes work around the R-2505 NAS China Lake restricted area. These are called "Colored" routes, because they named as Red, Blue, Green etc. low level routes and are used for local purposes only. These routes are NOT depicted on any sectional charts. Traffic flow is clockwise on even calendar days and counter-clockwise on odd calendar days. Joshua may be able to help and advise you if there is any low level traffic, but due to the rugged terrain and limitation with the radar tracking low level targets, they may not be able to identify traffic for you.
